

SPRINT DELIVERY 4

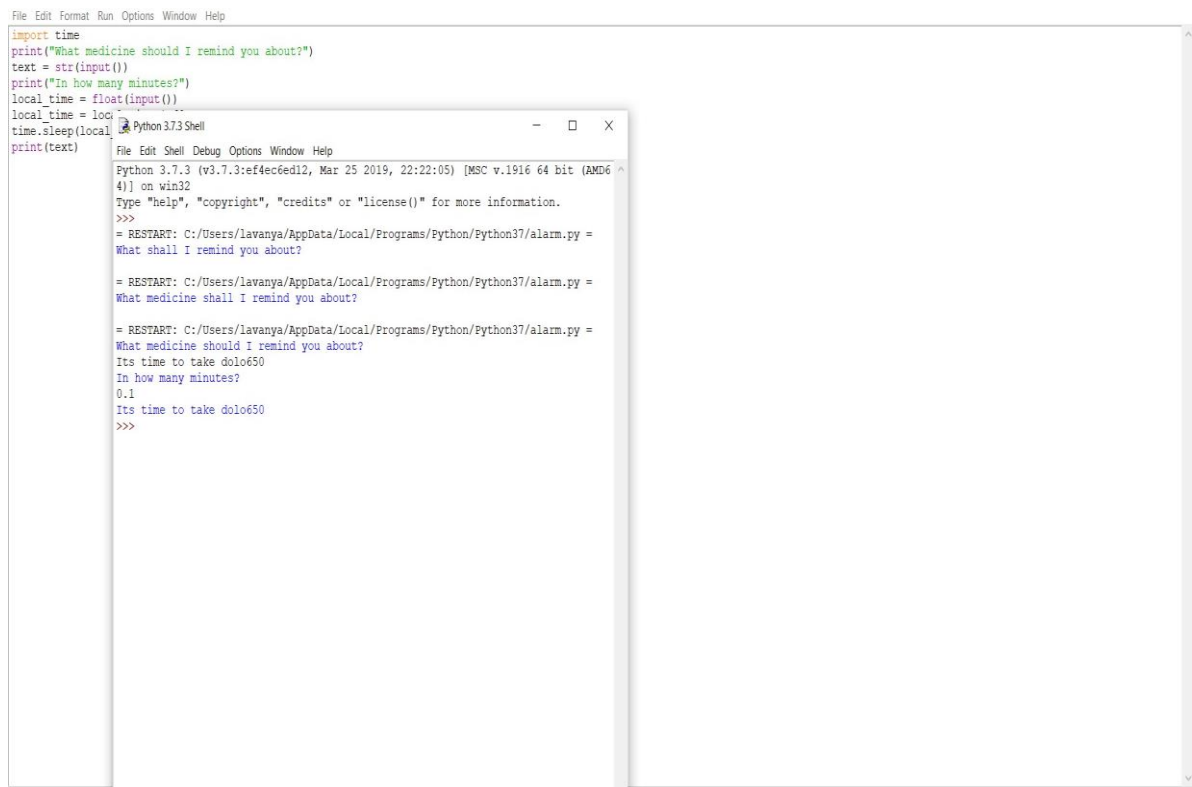

TEAM ID: PNT2022TMID04117

CREATING AN ALARM REMINDER USING PYTHON

CODE:

```
import time
print("What medicine should I remind you about?")
text = str(input())
print("In how many minutes?")local_time = float(input()) local_time =
local_time * 60 time.sleep(local_time) print(text)
```

OUTPUT:

The image shows a screenshot of a Python script and its execution output. The script is a simple alarm reminder program. It asks the user for the name of the medicine and the time in minutes. It then prints the reminder message and sleeps for the specified time.

```
File Edit Format Run Options Window Help
import time
print("What medicine should I remind you about?")
text = str(input())
print("In how many minutes?")
local_time = float(input())
local_time = local_time * 60
time.sleep(local_time)
print(text)
```

The output shows the program running in a Python 3.7.3 Shell. It prompts the user for the medicine name and the time in minutes. The user enters "What shall I remind you about?" and "0.1". The program then prints "Its time to take dolo650" and sleeps for 0.1 minutes.

```
Python 3.7.3 (v3.7.3:ef4ec6d12, Mar 25 2019, 22:22:05) [MSC v.1916 64 bit (AMD64)] on win32
